DETAILED ACTION

Claim Objections

Claims 1-17 are objected to because of the following informalities:

The first, second and third direction is confusing. The applicant should refer to what axis reference (x, y, z) that the first, second and third direction is corresponding to.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 6-7, 10-11, 13-16 are ejected under 35 U.S.C. 102(b) as being anticipated by Simmons (EP 0,729,206).

Simmons discloses an electrical connector comprising:

an insulator (20, Figure 9);

plate like portion (22);

contact pins (71);

plurality of grooves (38) on a first surface (24);

Art Unit: 2833

a pattern of depressed portion (44) and raise portion (formed by the depressed portion) each comprise two or more section separate from each other on a second surface (26, see Figure 9);

two side blocks (30);

a tubular metallic shell (80).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Simmons (EP 0,729,206) in view of Applicant Admitted Prior Art (background of invention).

Simmons substantially disclosed the claimed invention except for the insulator is made of anisotropic resin.

Applicant's APA teach anisotropic resin insulator.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide anisotropic resin material into Simmons's insulator, as taught by Applicant's APA for providing excellent heat resistance.

5. Claims 3-5, 8-9, 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Simmons (EP 0,729,206).

Art Unit: 2833

Simmons substantially disclosed the claimed invention except for the size and shape of the depressed and raised portion.

It would have been an obvious matter of design choice to change the size/shape, since such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. *In re Rose*, 105 USPQ 237 (CCPA 1955)

6. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Simmons (EP 0,729,206) in view of Mac (US 6,537,086).

Simmons substantially disclosed the claimed invention except for a ground plate.

Mac teaches a ground plate (20) with ground contacts (24).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to a ground plate into Simmons's connector, as taught by Mac for reducing electromagnetic interference.
